

HOW TO DETERMINE IF YOU NEED THE HOTFIX

--Continued on Page Two--

THE VERSION OF .NET FRAMEWORK YOU ARE RUNNING
DEPENDS ON WHETHER YOU NEED THE HOTFIX OR NOT

What Version of .NET framework are you running?

Not Sure -
Locate
Version

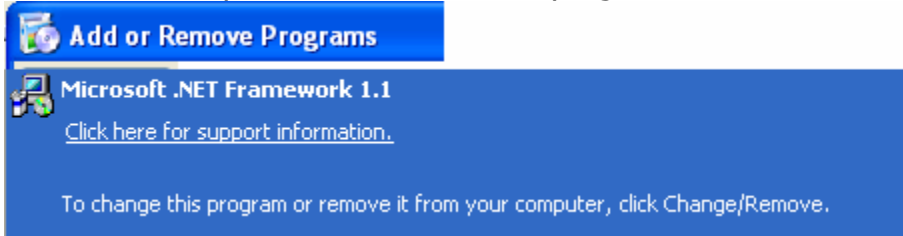

1.1

1.0

If you are running version 1.1 of the .Net Framework, you will need to sign on the PC as an administrator, apply the hot fix by saving it to the local machine and then executing the [MSHOTFIX.exe](#) from that local machine. Note, it cannot be executed from a network share. During the Hotfix installation, the PBAS user will be prompted to log on.

Hotfix is not needed.

Look in control panel and add/remove programs

NOTE: If you would like to upgrade to 1.1 you can find the download at <http://msdn.microsoft.com/netframework/downloads/updates/default.aspx> . We have not tested beta version 2.0 so we recommend you only use 1.1 After you have upgraded to 1.1 then install the [MSHOTFIX.exe](#)
